

Name of the event	PSCT BIP
Institution, which organised the event	TURIN
Country of the organiser	ITALY
Year of the event	2026
Date of the event (from-to)	09/03/26 – 12/03/26
Name(s) of the author(s)	Conceição, Raquel
Authors' institution	Portuguese Military Academy
Authors' country	Portugal

During the programme, students took part in a military strategic simulation combined with practical applications of mathematics, probability, statistics, and programming. Participants were divided into operational groups and assigned specific missions within a dynamic crisis scenario involving cyber threats and security challenges.

Each day, teams received situation updates and were required to develop strategic responses, including the preparation of official press releases outlining the measures adopted. The programme also included theoretical lessons followed by practical problem-solving sessions directly linked to the simulation, promoting analytical thinking and real-time decision-making.

Beyond the academic component, the initiative fostered teamwork, critical thinking, and technical communication skills, while enabling interaction with cadets from different institutions and countries.

The programme took place at the University of Turin and provided participants with a valuable international academic and cultural experience.
