The program's primary goal was to introduce participants to military wargaming as a versatile instrument for both training and research. The session drew cadets from five nations, including representatives from countries outside the European Union.

Throughout the program, cadets explored modern security systems, discussed current international conflicts, and examined potential approaches to addressing contemporary security challenges. The course comprised both theoretical and practical modules, with students collaborating in multinational teams during hands-on practical sessions.

Participants learned how to use wargaming to improve decision-making processes while taking into account organizational, social, cultural, and psychological factors. Beyond strategy, the course emphasized leadership; cadets explored methods for motivating subordinates, delegating tasks for maximum efficiency, and building trust-based professional interpersonal relations.

Wargaming serves as a cornerstone of planning and tactical decision-making across diverse operational environments, making it essential to the education of future military leaders. As training tool, it is designed to develop cadets' tactical imagination and critical thinking skills, enabling them to respond more effectively to the challenges of the modern battlefield in their future careers.
