Review results - INS module 1

Country	Institution	Course title:	ECTS
ITA	Naval Academy	NAVAL SENSORS	2
Service Navy	Minimum Qualification for Lecturers PhD degree in Communications Engineering		
Languages English	English: Common European Framework of Reference for Languages (CEFR) Level B2 or NATO STANAG Level 2+.		
SQF MILOF	Competence area - Military technician Learning area - Employment of weapon/ operating platform/ systems Organisation level – Single Arm/Branch		
Prerequisites for international participants: English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2. Elements of real, complex and vector calculus, electromagnetics and wave physics, and basic circuit theory.		Goals of the Module: <ul style="list-style-type: none"> • Explain technical specifications and design of relevant naval sensors • Demonstrate the effective exploitation of the relevant naval sensors with due consideration of safety measures 	
Learning outcomes	Knowledge	<ul style="list-style-type: none"> • Perform review of the characteristics and possibilities of the naval sensors (Navigational radar, Early Warning radar, CW radar, Multistatic radar, Over the Horizon radar, Phased Array radar, EW systems, Electro-optical systems) • Formulate basics of naval sensors management (military radar systems for detecting, tracking and locking on targets, EW systems, Electro-optical systems) as parts of integrated combat information systems in the sustainment realm of operations 	
	Skills	<ul style="list-style-type: none"> • Recognize the constructive type of equipment and integrated system by various specific criteria. • Deal with integrated combat information systems using the data provided by naval sensors. 	
	Responsibility and Autonomy	<ul style="list-style-type: none"> • Make correct tactical decisions exploiting information from different systems. • Manage on-board naval sensors in different warfare and scenarios. 	
Verification of learning outcomes			

<p>Observation:</p> <ul style="list-style-type: none"> ○ Class time is primarily assigned to lecturing. Educational materials such as slides or videos may be used in order to illustrate some of the basic points in the lecture in order to encourage discussions and debates about focus points. ○ Methods of teaching/lecturing are: lecturing, heuristic conversation, explanation, discussions/debates, case study, simulation of situations. <p>Tests: Final exam (written test).</p> <p>Evaluation: The final exam will consist in examination based on a multiple-choice test and applications of the taught subject.</p>

Module details		
Main Topic	Reco- mmended WH	Details
Pulsed radars	4	<ul style="list-style-type: none"> • Principles and performances • 2D, 3D, OTH, Phased Array radar overview • E.M. propagation effects • Block diagram • Clutter
CW radars	1	<ul style="list-style-type: none"> • Principles and performances • Block diagram • FM-CW radar
Secondary radars	2	<ul style="list-style-type: none"> • SIF modes • S mode
Fire control radars	1	<ul style="list-style-type: none"> • Target acquisition • Angular tracking techniques • Range tracking technique
Electronic warfare (EW)	1	<ul style="list-style-type: none"> • Terminology and principles of operation • Doctrine overview and outlooks
Passive EW	3	<ul style="list-style-type: none"> • Operational parameters • Interceptors and different types of receivers • Goniometric techniques
Active EW	2	<ul style="list-style-type: none"> • Operational parameters • Jamming techniques • Deception techniques

Country BG	Institution NVNA	Course title: Naval Cyber Threats	ECTS 3
----------------------	----------------------------	---	------------------

Service Navy	Minimum Qualification for Lecturers		
Languages English	<ul style="list-style-type: none"> • PhD degree in Cyber Security • English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2. 		
SQF MILOF	Competence area - Military technician Learning area - C4ISR systems & cyber defence Organisation level – Single Arm/Branch		
Prerequisites for international participants:		Goals of the Module:	
<ul style="list-style-type: none"> • English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2. • Computer network basic knowledge 		<ul style="list-style-type: none"> • To identify cyber security risks and cyber threats. • To defend system's vulnerability against possible cyber-attack. • To understand the complex cyber security basic principles of cyber security strategies in maritime domain. 	

Learning outcomes	Knowledge	<ul style="list-style-type: none"> • Formulate basics of information security, security of communications and data Encryption, Systems evaluation techniques, Vulnerability and methodologies of attack, the complex cyber security. • Perform review of principles of cyber security strategies in maritime domain.
	Skills	<ul style="list-style-type: none"> • Analyze threats for confidentiality, integrity and availability in IT and OT systems, risks for IT/OT networks and common applications. • Improve the personal and organizational cyber security identifying the task and tools.
	Responsibility and autonomy	<ul style="list-style-type: none"> • Evaluate Risk Assessments and VA&PT reports. • Deal with cyber threats.

Verification of learning outcomes

<ul style="list-style-type: none"> • Observation: <ul style="list-style-type: none"> ○ The course is consisted of theoretical classes followed by practice on cyber security laboratory. • Tests: <ul style="list-style-type: none"> ○ The module learning outcomes verification concept is based on assessment of trainee's knowledge, skills, and competences revealed after personal tasking during training process supported by fictitious scenarios. • Evaluation: <ul style="list-style-type: none"> ○ The final evaluation of trainees is made on basis of observation of results and practical tests during the final stage of the presented module. Certificate of attendance and individual feedback is provided to participants.
--

Module details		
Main Topic	Recommended WH	Details
Cyber security - characteristics and risk management in the Maritime Domain	8	<ul style="list-style-type: none"> • Cyber security characteristics • IT and OT systems • Development of protection plans and procedures - Roles, responsibilities, and tasks of maritime institutions.
The threats identification process	4	<ul style="list-style-type: none"> • Types of cyber threats • A cyber incident – definition and stages • Let's measure a cyber-threat.
Identification of vulnerabilities and risk management	4	<ul style="list-style-type: none"> • Typical vulnerable systems • Presenting a "Likelihood" as a projection of threat over vulnerability. • Assessment the Impact over critical vulnerabilities. • Risk assessment.
Dimensions of IT/OT convergence in cyber protection of the Maritime domain	4	<ul style="list-style-type: none"> • Common tasks and design of IT/OT systems. • The integration of information technology systems with operational technology systems onboard ships. • IT/OT convergence in Maritime Transportation System. • Development of protective measures.

Review results - INS module 4

Country RO	Institution RNA	Course title OCEANOGRAPHY	ECTS 2
------------	-----------------	------------------------------	-----------

Service Navy	Minimum Qualification for Lecturers		
Languages English	<ul style="list-style-type: none"> o Bachelor/ master degree in Nautical Sciences; o English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2+. 		
SQF MILOF	Competence area - Military technician Learning area - Employment of weapon/ operating platform/ systems Organisation level – Single Arm/Branch		
Prerequisites for international participants:		Goals of the Module:	
<ul style="list-style-type: none"> o English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2. o Minimal knowledge of the principles of fluid mechanics and physics. 		<ul style="list-style-type: none"> • correctly use of oceanography equipment on board the ship; • identify oceanographic features and phenomenon represented on prognosis charts; • identify and prevent dangerous phenomenon for the ship, sensors and crew; • understand acoustic parameters and propagation loss mechanism of sound waves; • optimize sonar performance accordingly to the sound speed profile; • planning sea routes in accordance with METOC information to prevent shipping accidents and other situations affecting safety of mission; • use NATO METOC documents and oceanographic information; 	

Learning outcomes	Knowledge	<ul style="list-style-type: none"> • Basic knowledge of the main topics of general and military oceanography. • Understand the Oceanographic Weather Organization (METOC) within NATO.
	Skills	<ul style="list-style-type: none"> • Enhance capabilities in navigation, <u>hydrography</u> and ship manoeuvring at the operational level; • Planning route, executing navigational watch in safe conditions and ship management in order to ensure a good seaworthiness of the ship, even the ship is alone or in a task group or task force.

Responsibility and autonomy	<ul style="list-style-type: none"> • Collect and manipulate oceanic, atmospheric, and geospatial data sets and rigorously analyse and interpret observational data, in situ experimental data, and model results. • Analyse and interpret flow of operational METOC data, in naval military operations.
------------------------------------	---

Verification of learning outcomes	
o Observation:	<ul style="list-style-type: none"> o Class time is primarily assigned to lecturing. Different materials from the supplementary readings will be used in order to illustrate some of the basic points in the lecture as scheduled for that day, in order to encourage discussions and debates about these focus points. o Methods of teaching/lecturing are: lecturing, heuristic conversation, explanation, discussions/debates, case study, problem-solving, simulation of situations, methods of group work, individual and frontal methods for developing critical thinking, self-study of references.
o Tests:	<ul style="list-style-type: none"> a. The ongoing assessment during the seminars and problem-solving tasks will count 50%, as the average of homework evaluation during the seminars. b. Final exam (written test): 50%.
o Evaluation:	<ul style="list-style-type: none"> o The final exam will consist in: Examination based on a multiple-choice test and applications of the taught subject. The student should pass the final assessment with minimum grade of 5.

Module details		
Main Topic	Recommended WH	Details
Introduction to military Oceanography	4	<i>Lecture/seminar 4/2 hours:</i> The object of Oceanography. History of military oceanography. Physical-chemical properties of the sea water. General marine topography. Oceanic data, instruments and collection methods.
Dynamics of marine waters.	6	<i>Lecture/seminar 4/2 hours:</i> <i>Waves:</i> wind waves, swell and other forms of movement of marine waters and their influence on navigation. <i>Ocean currents flow,</i> Characteristics of main ocean currents influence against the navigation.

SQF MILOF	<ul style="list-style-type: none"> • Competence area: Military technician • Learning area: Sustaining the force • Organisation level: Single Arm/Branch, Single Service

Goal of the Module	
Prerequisites for international participants: <ul style="list-style-type: none"> • English: Common European Framework of Reference for Languages (CEFR) Level B1 or NATO STANAG Level 2. • At least 1 year of national (military) higher education. 	<ul style="list-style-type: none"> • To acquire specialized terminology in the field of aviation meteorology. • To understand the mechanisms by which meteorological factors influence flight activities. • To acquire knowledge on meteorological phenomena and hazards that affect flight activities. • Learning of a specialized language, coherent and concretely, able to ensure the achievement of a level of scientific training in accordance with the current requirements in the field.

Learning outcomes	Knowledge	<ul style="list-style-type: none"> • Formulate the basics of the generation and development of weather elements and atmospheric phenomena and their impact on flight safety. • Describe the special codes used in the operational messages transmitted in aeronautical meteorology.
	Skills	<ul style="list-style-type: none"> • To understand and to interpret the meteorological information that affects flights. • To decode meteorological information, according to the special codes used in the operational messages transmitted in aeronautical meteorology (METAR/SPECI, TAF, SIGMET) in order to understand the presence of adverse weather conditions.
	Responsibility & Autonomy	<ul style="list-style-type: none"> • Make decision with respect to handle the weather information and analysis.

Verification of Learning Outcomes	
Observation	<ul style="list-style-type: none"> • Constantly recalling the information previously learned and observing the interest of students on aviation meteorology information and their level of understanding.
Test	<ul style="list-style-type: none"> • Written test comprised of multiple choice and open answer questions.
Assignment	<ul style="list-style-type: none"> • Decode meteorological information issued in METAR/SPECI, TAF, SIGMET format.
Case study	<ul style="list-style-type: none"> • A case study will be discussed in the context of a weather scenario that affects flight safety.

Review results

- The content of the modules: the content is coordinated with the projects academic coordinators
- BIP Vs. traditional modules – the qualification requirements are the same, just the verb that explain the deepness of knowledge can vary

References

- SQF MILOF
- Bloom taxonomy

Comprehension may be defined as the ability to understand and interpret learned information. Some of the action verbs used to assess comprehension are shown in Fig. 3.4.

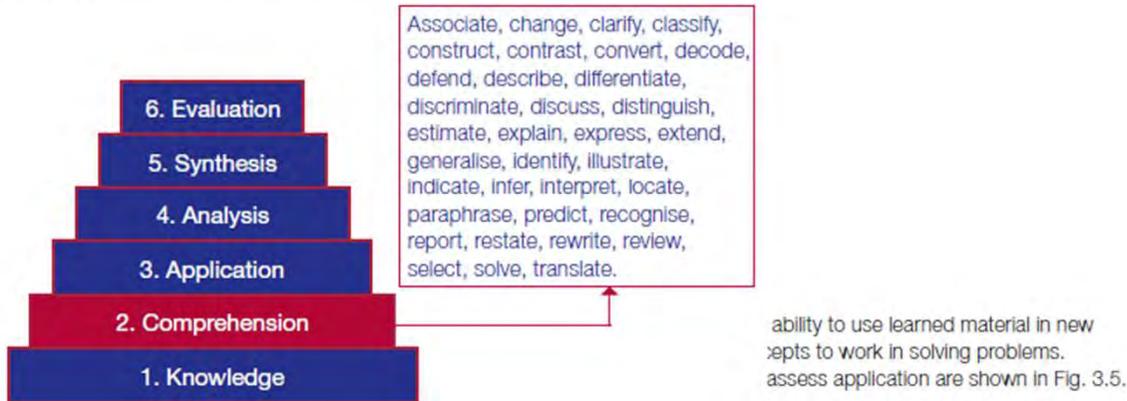

Fig. 3.4 Some action verbs used to assess comprehension

CM "Electronic Warfare" - SQF MILOF

methodology	Electronic Warfare
First step - determine which competence area and respective learning area covers the topic of the common module. For detailed information see section 02 of the second volume of SQF MILOF package, Reference to chapter 13.1. SQF-MILOF Learning Outcomes, Volume 1	competence area - Military technician learning area - Sustaining the force
Second Step - define the organisation level of SQF-MILOF that the common module is directed to.	Organisation level - Single Arm/Branch
Third step - define EQF level	EQF 6 (Level 2)
Fourth step - fix knowledge, skills and R&A respective to the defined learning area, organisation level and EQF level, using the table in section 04. SQF-MILOF Proper of the second volume of SQF MILOF package	Knowledge: Advanced knowledge of the characteristics and possibilities of the weapons systems / operating platform and C4ISR systems, managing resources in the sustainment realm of operations. Skills: Advanced skills required to operate and maintain specific weapons systems/operating platform and C4ISR systems in safe conditions to deliver requested or planned effects by a higher authority > Manage resources and various projects at an advanced level. Responsibility and Autonomy: Take responsibility to manage scarce organisational resources in unforeseen and changing situations of the operating environment, prioritizing and allocating appropriate resources to subordinate units to accomplish specific objectives in full spectrum of operations and in peacetime.
Fifth step - fix qualifications requirements respective to the defined learning area, organisation level and EQF level, using the table in section 05. SQF-MILOF CORE	Explain the combat service support capabilities of subunits during full spectrum operations > Define the logistics requirements of the (sub)units required to sustain full spectrum operations..

Unrevised CMs

No	COMMON MODULE	ECTS	Remarks
1	Advanced Technologies in Borders Surveillance	2	MUT (PL) 2019
2	Aviation English for ICAO LPR	3	
10	Common Operating Environment	3	
23	English for Aircraft Maintenance– SET Part 1	3	
24	English for Aircraft Maintenance– SET Part 2	3	
25	English for Aircraft Maintenance– SET Part 3	3	
26	English for Aviation Security Personnel (AVSEC)	3	
31	Individual Personal Development and Meta-Communication	2	TMA (AT) 2020
35	Leadership and Agility in Complex Environments	2	ITAFA (IT) 2018
38	Maritime Leadership	2	FR NAVY 2012
42	Military Instructor Training	3	
48	Small Unit Tactics	4	

LoDs proposal:

- **IG to approve the 10 INS modules and the 8 INS modules as “common modules”**
- **The existing CMs Maritime security, Maritime leadership, Military ethics A, and Military ethics B to be replaced by the proposed Maritime security, Naval leadership, and Military ethics.**
- **The review process to continue with the developed LoDs modules**

LoD 01 & 02 & 08

LoD-1 & 2 & 8 session -
Thank you for join us!

Any questions??
