

Line of Development - 20 Space

Recognize the critical mass of Academic staff related to space.

Country	✓ Name	Column1	Surname	▼ Institution
Spain	Ignacio	de Goili	Alvarez	SPAFA
Latvia	Janis		Gavrilovs	
Spain	Luis	Verjano	Zapata	SAFA
Norway	Someb		Mushtaq	Naval Academy
Portugal	Vasco		Coelho	PrAFA
France	Philippe		Guillot	FASFA
France	Ladislas		Szepessy	FASFA
Romania	Vasile		Carutaru	
Spain		Martinez	Perez	
Bulgaria	Lumbomiv		Manov	BAFA
Poland	Marek		Gauvyjdek	PAFU
Belgium	Jean-Alain		Groovaerts	RMA
Greece	Vyron		Antoniou	HAA
Greece	Panagiotis		Papakanelos	HAFA

Please share with the LoD the contact details of all academics that might be related to Space domain.

AGENDA (67nd IG)

- Presentation of the CM
- Implementation Strategy and Academic Engagement
- Future Plans and Expansion Opportunities

AGENDA (67nd IG)

Space-based ISR & Situational Awareness (SB ISR & SA)

GR GR	Institution Hellenic Army Academy	Common Module Space-based ISR, Operations & Situational Awareness (SB ISR & SA)	2.0 (+ 1.0 e-learning)
-------	-----------------------------------------	------------------------------------------------------------------------------------------	---------------------------

Service	Minimum Qualification for Lecturers
ALL	Fully qualified Geospatial Engineer Officer.
Language English	Outstanding knowledge of Earth Observation and Remote Sensing Scienc Space Meteorology and/or Space Operations. Phd Engineering, Mathematics and/or Physics applied to Space Operation. Advanced experience in Gee-Intelligence. Specialists/Teaching experience in the field of Geospatial Engineering, Earth Observation or Geospatial Support. English: Common European Framework of Reference for Languages (CEFR Level 82 or NATO STANG Level 3.)
SQF MILOF	Competence area - Military technician Learning area - C4ISR systems & Space Organisation level - Single service

Prerequisites for international		Goal of the Module
•	participants English: Common European Framework of Reference for Languages (CEER) Level 82 or	
		Exploit the SESA capabilities for Situational Awareness Adquire, basic knowledge in space operations, orbital mechanics, space meteorology and space debris.

	Knowledge	 Master remote sensing and data processing by learning remote sensing principles and data processing techniques for ISR and SA. Understand space-based systems and operations by gaining knowledge of satellite types, critis, payloads and space operations.
earning	Skills	 Apply satellite and ISR data for intelligence and operational decision-making by applying imagery, interpreting multi-source data, and using satellite information in operational scenarios. Develop technical skills in geospatial analysis and orbital mechanics by applying image processing, using GEOINT tools and orbital elements.
- 0	R&A	 Develop analytical and operational decision-making skills by critically carboring ISR and SA data, recognizing threats, and understanding space-based intelligence and operational capabilities. Collaborate effectively in intelligence analysis by working in teams to evaluate ISR intelligence, space operations and formulate responses.

Verification of learning outcomes:

- . Observation: Throughout the module, students will discuss topics within syndicates and in
- the plenary. During this work, students are evaluated to verify their performance.

 Evaluation; Group presentations of given topics.

. Test: Written exam (multiple choice) at the end of the Module

Module Dissarbition

Implementation Group
Doc.: KN XXXX
Index: DO MM YYYY
Ongo: XXXXI

Module details			
Main Topic	Residential LU (WH)	E-learning LU (WH)	Detalle
Introduction to Space-Based ISR & SA	4(3)	2 (1.5)	Overview of ISR (Intelligence, Surveillance, and Reconnissance) and SA (Shataharia Awareness) History and evolution of space-based ISR & SA Key advantages and challenges Types of satellites used for ISR (e.g., optical, radar, signals intelligence) and SA Satellite sersors and payloads Space Operations Basic Parameters.
Fundamentals of Remote Sensing	3 (2.25)	2 (1.5)	Basics of optical, radar, and hyperspectral imaging Resolution (spatial, temporal, spectral) Image acquisition and pre-processing
Image Processing for ISR	4 (3) (inc. 2 (1.5) SW)	3 (2.25)	Image processing techniques. Practical session on image processing techniques.
image Analysis for ISR	3 (2.25) (inc. 2 (1.5) SW)	3 (2.25)	 Operational requirements for ISR and SA addressed by space-based assets Practical session on image interpretation and analysis
Space-Based Communications, Navigation, Positioning	2 (1.5)	2 (1.5)	Role of saxelities in military communications Secure data transmission and encryption Satellite-ground station interaction GNSS systems in ISR Role in precision targeting and navigation Jamming and spoofing threats
Threats to Space- Based Assets	2 (1.5)	2 (1.5)	Space Surveillance and Tracking / Space Situational Awareness (SST/SSA) Artis-satelitiz (ASAT) weapons and electronic warfare Space debris Cuber-threats to space assets
Applications of ISR and Situational Awareness in Military Operations	3 (2.25) (incl 2 (1.5) SW)		 ISR in border security, battlefield awareness, and maritime surveillance Tactical and operational applications of ISR data Integration of ISR data with command and control (C2) systems
Demonstration and Scenario- Based Training	5 (3.75) (ind 4 (3) SW)		Group exercises using open-source satellite imagery
Exams	2 (1.5)	1 (0.75)	Final Exam Self-evaluation tests.
Total lectures and e-learning lessons	28 (21) (18 (13.5) + 10 (7.5) SW)	15 (11.25)	A minimum of MRUs is part of the regular CM and is required polety to have a minimum of common knowledge before the residential phase. In addition, in the case of a 3 ECTS SS-ISI SA CM Version, it is required that 1/3 of lectures are via electring, in both cases, the selection of e-learning topics is up to the Course Director mainly by using the e-learning material available on the ESDC platform or provided by the initiative.
Self-Studies	22 (16.5)	10 (7.5)	Self-studies, pre-readings & self-evaluation tests. E-learning may also be counted as self-studies.
Total	50 (2 ECTS)	25 (HECTS)	The detailed amount of hours for the respective main topic is up to the course director according to national law or the hom institution's rules.

AGENDA (67nd IG)

TOPIC	ACADEMIC TEACHING
Overview of ISR (Intelligence, Surveillance, and Reconnaissance) and SA (Situational Awareness)	
History and evolution of space-based ISR & SA	
Key advantages and challenges	
Types of satellites used for ISR (e.g., optical, radar, signals intelligence) and SA	
Satellite sensors and payloads	
Space Operations Basic Parameters.	
Basics of optical, radar, and hyperspectral imaging	
Resolution (spatial, temporal, spectral)	
Image acquisition and pre-processing	
Image processing techniques	
Practical session on image processing techniques	
Operational requirements for ISR and SA addressed by space-based assets	
Practical session on image interpretation and analysis	
Role of satellites in military communications	
Secure data transmission and encryption	
Satellite-ground station interaction	
GNSS systems in ISR	
Role in precision targeting and navigation	
Jamming and spoofing threats	
Space Surveillance and Tracking / Space Situational Awareness (SST/SSA)	
Anti-satellite (ASAT) weapons and electronic warfare	
Space debris	
Cyber-threats to space assets	
ISR in border security, battlefield awareness, and maritime surveillance	
Tactical and operational applications of ISR data	
Integration of ISR data with command and control (C2) systems	
Group exercises using open-source satellite imagery	

LoD 20 (Space) – Next Steps

- Share the Common Module to LoD-20 participants
- Share the Form for the Academic Teaching Offering for the CM topics
- Academic Offerings will be discussed in the next IG
- Plan to provide this CM during the Academic year 2025-2026 (Spring Semester as BIP)

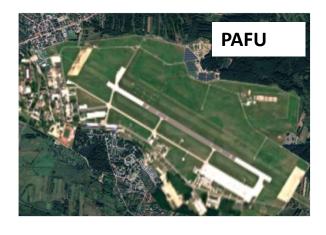

Line of Development - 20 Space
